Aftercare

Lakeside Academy uses STEM integration and design thinking principles to inform and guide instruction in all subject areas. Every student has access to technology with Chromebooks.

The MakerSpace is one of the innovation spaces in which students to work through the entire engineering design process and create a working prototype of video, 3D printing, and other exciting learning tools. Each Innovation Wednesday, students spend extended time in related arts for project-based learning. Students showcase their knowledge once a semester at Lakeside Academy's Innovation Expo.
